

Name: aGrisù s.r.l.

Year of Foundation: 2013

Sector: electronic processing, modeling and big data analysis

Activities:

aGrisù will be able to collect a huge size of data related to the geolocation of pollutants, the physiological parameters of the end users and the influence that pollutants have on the daily activities and the well-being of individuals. These data will be useful for planning strategies for a lot of actors: Public Authorities, Real Estate Industries, Health Industries and Travel Operators.

One of the objectives of the aGrisù team is to extend the network of data through partnerships with National and International Institutions.

aGrisù will also produce micro-devices monitoring air quality. Devices are fully customizable depending on the type of pollutant.

Selling of monitoring devices will be integrated in aGrisù network and through crowdfunding portals and will serve as a node of information for all users of the system aGrisù.

Products / Services:

aGrisù's goal is to provide products and services to raise awareness of the knowledge of the influence of pollutants on the daily activities and on preventive healthcare.

Market:

Customers: large corporations with programs of Corporate Social Responsibility, manufacturers of sports app

Final users: ordinary people and athletes, worried about their health
