

TecnArt S.r.l. (Academic spin-off of the University of Torino)

Foundation year: 2012

Sector: archaeometry and diagnostics applied to Cultural Heritage

TecnArt S.r.l. is an Academic spin-off of the University of Torino (Italy), which operates in the field of diagnostics applied to Cultural Heritage. The aim is to apply methodologies and scientific technologies in the field of Cultural Heritage, in order to better know, preserve and enhance historical and artistic works of art, assuring a continuous evolution of analytical methodologies and the developing of instruments expressly designed for the study of different materials.

Tecnart S.r.l. provides a broad range of services completely dedicated to authentication and dating of ancient findings, to the analysis of materials constituting works of art and to the study of its conservation conditions. Results obtained allow to have more information on the objects under analysis, contributing to develop a correct and scientific restoration plan and producing certificates which certify the value of artworks. Our services are thought both for Public Institutions and privates.

Moreover our experience can be used for the realization of thermoluminescence dating and X-ray imaging laboratories and for the training of specialized staff, also in foreign countries.
