Università di Torino.

Il seminario sarà in lingua inglese ed è parte del
Laboratorio di Studi di Genere 2018/2019.
L'ingresso è libero e aperto a tutti/e.
Per informazioni: cirsde@unito.it

“Despite 17th century assertions that ‘the mind has no sex’, neuroscience research in subsequent centuries (including the 21st) has appeared to focus on finding confirmatory evidence of the “essential” difference between men’s and women’s brains. As covered in my book, *The Gendered Brain*, explanations of these gaps encapsulate almost every aspect of wider arguments about the origin of sex/gender differences”.
