Visiting Professor Program
Academic Year 2024/2025

TEACHING COMMITMENT: 12 hours

COURSE TITLE
Neurodevelopmental Diseases

TEACHING PERIOD
2nd term

SCIENTIFIC AREA
BIO06

LANGUAGE USED TO TEACH
English

COURSE SUMMARY
The aim of this course is to enable insight into the neural and molecular mechanisms of neurodevelopmental disorders by coupling data from preclinical animal models to the clinical phenotype. The goal of this module is to teach and train master students in the latest developments in the field of neural circuit development, plasticity and disease through the direct and active interaction with an internationally recognised expert in the field.

LEARNING OBJECTIVES
Through the analysis of the most recent literature and active discussion, the students will develop critical thinking and knowledge on the cellular/molecular mechanisms underlying normal development, function and dysfunction of the nervous system. Students will learn from an experienced researcher how to address problems and formulate research questions. They will also
acquire in-depth knowledge of the novel, cutting-edge approaches and technologies that can be applied synergistically to study any cell-tissue system development.

none

OTHER ACTIVITIES BESIDES THE COURSE
Seminar addressed to PhD students.

VISITING PROFESSOR PROFILE
The Visiting Professor should be an internationally recognized specialist in the field of neural development, with a long lasting and documented track-record in brain development and plasticity and disease. She/he should have experience in teaching, in particular in the relevant area of neural development at the level of advanced master and/or early PhD students. We seek someone with deep experience in the neural development research field and a clear profile in neuroscientific topics relevant for our population of master students.
