COURSE SUMMARY

The course aims to study the logic, the responsibility centres and the tools of the management control in the enterprises, with particular attention to the manufacturing ones. The purpose of the course is to provide students with the knowledge and understanding about the mechanisms of the managerial system, useful to guide and empower managers to the global objectives of the firm, side by side in an initial capacity to apply this knowledge and understanding in simple practical case studies. The course enables graduates to acquire the necessary skills to his joining the company, where through the study and understanding of all business processes, will become a figure of reference for the activities of management control and support to operational managers in their decision making. The course also allows the graduate who will specialize in some other area of management to acquire the basic skills for programming and monitoring of its actions in key economic and financial.

LEARNING OBJECTIVES

At the end of the course student is expected to be capable of:

- Knowing and understanding the logic of management control as a directional process and its mechanisms and technical – accounting tools;

- Applying knowledge about the management control logic and tools to the planning, budgeting and reporting issues;
- Making judgements to critically analyse the issue and selected solutions discussed in the business cases study;
- Using communication skills to discuss in the classroom the business cases studied in the individual and team work, using appropriate supports;
- Using learning skills to verify ongoing the learning degree of the managerial logic, also and in particular through the business cases study and discussion.
