Visiting Professor Program Academic Year 2025/2026

TEACHING COMMITMENT: 20 hours

COURSE TITLE Experimental Economics for the Environment

TEACHING PERIOD

SCIENTIFIC AREA Economics

LANGUAGE USED TO TEACH English

COURSE SUMMARY

The Laboratory will allow students to explore the potential of experimental work in environmental and resource economics and discover how laboratory and field experiments can be used for both positive and normative purposes. It will deal with the behavioural foundations of environmental economics and environmental valuation, with incentive-compatible mechanisms for providing public goods, with cooperative and non-cooperative behaviour in the management of natural resources. It will have an interactive and applied approach.

LEARNING OBJECTIVES

Students will acquire the instruments necessary to interpret the behaviour of economic agents in relation to natural resources and the environment.

At the end of the laboratory, students should be able to understand experiments applied to environmental economics presented in scientific papers and consider designing their own experiment for the purpose, for example, of writing their research thesis.

OTHER ACTIVITIES BESIDE THE COURSE

VISITING PROFESSOR PROFILE

The ideal Visiting Professor should have (i) research and teaching experience in experimental and behavioural economics applied to environmental and natural resource issues; (ii) interest and experience in innovative and interactive teaching approaches; (iii) competence in delivering lectures in English.
